**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## ZSCAN2 (NM\_017894) Human Tagged ORF Clone Lentiviral Particle - RC224429L3V

**MW:** 16.7 kDa

**Gene Summary:** The protein encoded by this gene contains several copies of zinc finger motif, which is

commonly found in transcriptional regulatory proteins. Studies in mice show that this gene is expressed during embryonic development, and specifically in the testis in adult mice, suggesting that it may play a role in regulating genes in germ cells. Alternative splicing of this

gene results in several transcript variants encoding different isoforms. [provided by RefSeq,
