ENT1 (SLC29A1) (NM 001078174) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ENT1 (SLC29A1) (NM_001078174) Human Tagged ORF Clone Lentiviral Particle

Symbol: ENT1 Synonyms: **Mammalian Cell** None

Selection:

Vector: pLenti-C-Myc-DDK (PS100064)

Myc-DDK Tag:

NM 001078174 ACCN:

ORF Size: 1368 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC224438).

Sequence: OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001078174.1, NP 001071642.1

RefSeq Size: 2344 bp RefSeq ORF: 1371 bp Locus ID: 2030 **Cytogenetics:** 6p21.1

Protein Families: Transmembrane

50.2 kDa MW:

Gene Summary:

This gene is a member of the equilibrative nucleoside transporter family. The gene encodes a transmembrane glycoprotein that localizes to the plasma and mitochondrial membranes and mediates the cellular uptake of nucleosides from the surrounding medium. The protein is categorized as an equilibrative (as opposed to concentrative) transporter that is sensitive to inhibition by nitrobenzylthioinosine (NBMPR). Nucleoside transporters are required for nucleotide synthesis in cells that lack de novo nucleoside synthesis pathways, and are also necessary for the uptake of cytotoxic nucleosides used for cancer and viral chemotherapies. Multiple alternatively spliced variants, encoding the same protein, have been found for this gene. [provided by RefSeq, Jul 2008]
