STK32C (NM_173575) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: STK32C (NM_173575) Human Tagged ORF Clone Lentiviral Particle

Symbol: STK32C

Synonyms: PKE; YANK3

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_173575 **ORF Size:** 1458 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC224449).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 173575.2

 RefSeq Size:
 2141 bp

 RefSeq ORF:
 1461 bp

 Locus ID:
 282974

 UniProt ID:
 Q86UX6

 Cytogenetics:
 10q26.3

Protein Families: Druggable Genome, Protein Kinase

MW: 54.8 kDa

Gene Summary:

The protein encoded by this gene is a member of the serine/threonine protein kinase family. It is thought that this family member is functional in brain due to its high expression levels there. DNA methylation differences have been found in this gene in monozygotic twins that are discordant for adolescent depression. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2016]
