

Product datasheet for RC224465L3

DPP9 (NM_139159) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: DPP9 (NM_139159) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

DPP9 Symbol:

DP9; DPLP9; DPP IX; DPRP-2; DPRP2 Synonyms: Puromycin

Mammalian Cell

Selection: Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC224465).

Restriction Sites:

Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_139159

ORF Size: 2550 bp

DPP9 (NM_139159) Human Tagged Lenti ORF Clone - RC224465L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Druggable Genome, Protease

RefSeq: <u>NM 139159.3</u>, <u>NP 631898.2</u>

 RefSeq Size:
 4274 bp

 RefSeq ORF:
 2679 bp

 Locus ID:
 91039

 UniProt ID:
 Q86TI2

 Cytogenetics:
 19p13.3

Domains: Peptidase_S9, DPPIV_N_term

MW: 96.4 kDa

Protein Families:

Gene Summary: This gene encodes a protein that is a member of the S9B family in clan SC of the serine

proteases. The protein has been shown to have post-proline dipeptidyl aminopeptidase activity, cleaving Xaa-Pro dipeptides from the N-termini of proteins. Although the activity of this protein is similar to that of dipeptidyl peptidase 4 (DPP4), it does not appear to be

membrane bound. In general, dipeptidyl peptidases appear to be involved in the regulation of the activity of their substrates and have been linked to a variety of diseases including type 2 diabetes, obesity and cancer. Several transcript variants of this gene have been described but

not fully characterized. [provided by RefSeq, Jul 2008]
