Ceruloplasmin (CP) (NM_000096) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Ceruloplasmin (CP) (NM_000096) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Ceruloplasmin

Synonyms: CP-2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Sgfl-Mlul

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC224598).

Sequence:

Restriction Sites: Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_000096

ORF Size: 3195 bp

Ceruloplasmin (CP) (NM_000096) Human Tagged Lenti ORF Clone - RC224598L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000096.1</u>, <u>NP 000087.1</u>

 RefSeq Size:
 3321 bp

 RefSeq ORF:
 3198 bp

 Locus ID:
 1356

 UniProt ID:
 P00450

Cytogenetics: 3q24-q25.1

Domains:

Protein Families: Druggable Genome

Protein Pathways: Porphyrin and chlorophyll metabolism

Cu-oxidase

MW: 122.21 kDa

Gene Summary: The protein encoded by this gene is a metalloprotein that binds most of the copper in plasma

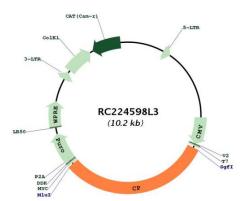

and is involved in the peroxidation of Fe(II)transferrin to Fe(III) transferrin. Mutations in this gene cause aceruloplasminemia, which results in iron accumulation and tissue damage, and is associated with diabetes and neurologic abnormalities. Two transcript variants, one

protein-coding and the other not protein-coding, have been found for this gene. [provided by

RefSeq, Feb 2012]
