Gene Summary:Defensins form a family of antimicrobial and cytotoxic peptides made by neutrophils.
Defensins are short, processed peptide molecules that are classified by structure into three
groups: alpha-defensins, beta-defensins and theta-defensins. All beta-defensin genes are
densely clustered in four to five syntenic chromosomal regions. Two transcript variants
encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2014]
