

Product datasheet for RC224626L4

DLGAP4 (NM_014902) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: DLGAP4

Synonyms: DAP-4; DAP4; DLP4; SAPAP-4; SAPAP4

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

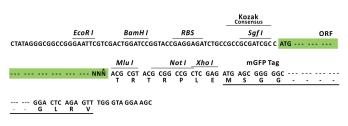

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC224626).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_014902

ORF Size: 2967 bp

DLGAP4 (NM_014902) Human Tagged Lenti ORF Clone | RC224626L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_014902.2</u>

RefSeq Size: 5007 bp

RefSeq ORF: 2970 bp

Locus ID: 22839

UniProt ID: Q9Y2H0

Cytogenetics: 20q11.23

MW: 107.4 kDa

Gene Summary: The product of this gene is a membrane-associated guanylate kinase found at the

postsynaptic density in neuronal cells. It is a signaling molecule that can interact with

potassium channels and receptors, as well as other signaling molecules. The protein encoded

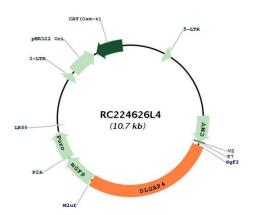

by this gene can interact with PSD-95 through its guanylate kinase domain and may be involved in clustering PSD-95 in the postsynaptic density region. The encoded protein is one of

at least four similar proteins that have been found. Alternatively spliced transcript variants

encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
