	KAT8 (NM_032188) Human Tagged ORF Clone Lentiviral Particle – RC224748L1V
MW:	52.9 kDa
Gene Summary:	This gene encodes a member of the MYST histone acetylase protein family. The encoded protein has a characteristic MYST domain containing an acetyl-CoA-binding site, a chromodomain typical of proteins which bind histones, and a C2HC-type zinc finger. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Feb 2012]
