OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

MPP5 (NM_022474) Human Tagged ORF Clone Lentiviral Particle - RC224752L4V

Protein Pathways: Tight junction

MW: 77.3 kDa

Gene Summary: This gene encodes a member of the p55-like subfamily of the membrane-associated

guanylate kinase (MAGUK) gene superfamily. The encoded protein participates in the polarization of differentiating cells, has been shown to regulate myelinating Schwann cells (PMID: 20237282), and is one of the components of the Crumbs complex in the retina. Mice which express lower levels of the orthologous protein have retinal degeneration and

impaired vision (PMID: 22114289). Multiple transcript variants encoding different isoforms

have been found for this gene. [provided by RefSeq, Feb 2012]
