Gene Summary:This gene encodes a member of the peptidase C65 family of ubiquitin isopeptidases.
Members of this family remove ubiquitin from proteins. The encoded enzyme specifically
recognizes and removes M1(Met1)-linked, or linear, ubiquitin chains from protein substrates.
Linear ubiquitin chains are known to regulate the NF-kappa B signaling pathway in the
context of immunity and inflammation. Mutations in this gene cause a potentially fatal
autoinflammatory syndrome in human patients. [provided by RefSeq, Sep 2016]
