CTBP2 (NM_001329) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CTBP2 (NM_001329) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: CTBP2
Mammalian Cell None

- ·

Selection:

Vector:

pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

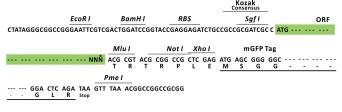

The ORF insert of this clone is exactly the same as(RC224861).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

* The last codon before the Stop codon of the ORF.

ACCN: NM_001329

ORF Size: 1335 bp

CTBP2 (NM_001329) Human Tagged Lenti ORF Clone - RC224861L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001329.1</u>

RefSeq Size: 2368 bp
RefSeq ORF: 1338 bp
Locus ID: 1488
UniProt ID: P56545

Cytogenetics: 10q26.13

Domains: 2-Hacid_DH, 2-Hacid_DH_C

Protein Families: Stem cell - Pluripotency, Stem cell relevant signaling - Wnt Signaling pathway

Protein Pathways: Chronic myeloid leukemia, Notch signaling pathway, Pathways in cancer, Wnt signaling

pathway

MW: 48.8 kDa

Gene Summary: This gene produces alternative transcripts encoding two distinct proteins. One protein is a

transcriptional repressor, while the other isoform is a major component of specialized synapses known as synaptic ribbons. Both proteins contain a NAD+ binding domain similar to NAD+-dependent 2-hydroxyacid dehydrogenases. A portion of the 3' untranslated region was

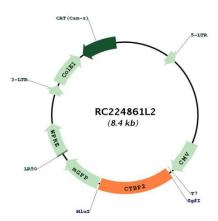

used to map this gene to chromosome 21q21.3; however, it was noted that similar loci elsewhere in the genome are likely. Blast analysis shows that this gene is present on

chromosome 10. Several transcript variants encoding two different isoforms have been found

for this gene. [provided by RefSeq, Feb 2014]
