## CNBP (NM\_001127193) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** CNBP (NM\_001127193) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: CNBP

Synonyms: CNBP1; DM2; PROMM; RNF163; ZCCHC22; ZNF9

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC225188).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

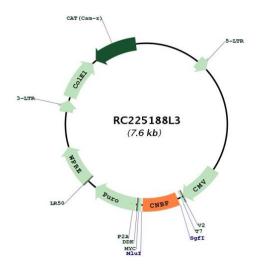

st The last codon before the Stop codon of the ORF.

#### Plasmid Map:

**ACCN:** NM\_001127193

ORF Size: 534 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** NM 001127193.1

RefSeq ORF: 537 bp Locus ID: 7555

### CNBP (NM\_001127193) Human Tagged Lenti ORF Clone - RC225188L3

UniProt ID: P62633

Cytogenetics: 3q21.3

**Protein Families:** Druggable Genome, Transcription Factors

MW: 19.4 kDa

**Gene Summary:** This gene encodes a nucleic-acid binding protein with seven zinc-finger domains. The protein

has a preference for binding single stranded DNA and RNA. The protein functions in capindependent translation of ornithine decarboxylase mRNA, and may also function in sterolmediated transcriptional regulation. A CCTG expansion from <30 repeats to 75-11000 repeats

in the first intron of this gene results in myotonic dystrophy type 2. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul

2016]
