Heme oxygenase 2 (HMOX2) (NM_001127204) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: Heme oxygenase 2 (HMOX2) (NM 001127204) Human Tagged ORF Clone Lentiviral Particle

Symbol: Heme oxygenase 2

Synonyms: HO-2

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_001127204

ORF Size: 948 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC225451).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001127204.1, NP 001120676.1

 RefSeq ORF:
 951 bp

 Locus ID:
 3163

 UniProt ID:
 P30519

Cytogenetics: 16p13.3

Protein Families: Transmembrane

Protein Pathways: Porphyrin and chlorophyll metabolism

MW: 35.9 kDa

Heme oxygenase 2 (HMOX2) (NM_001127204) Human Tagged ORF Clone Lentiviral Particle – RC225451L3V

Gene Summary:

Heme oxygenase, an essential enzyme in heme catabolism, cleaves heme to form biliverdin, which is subsequently converted to bilirubin by biliverdin reductase, and carbon monoxide, a putative neurotransmitter. Heme oxygenase activity is induced by its substrate heme and by various nonheme substances. Heme oxygenase occurs as 2 isozymes, an inducible heme oxygenase-1 and a constitutive heme oxygenase-2. HMOX1 and HMOX2 belong to the heme oxygenase family. Several alternatively spliced transcript variants encoding three different isoforms have been found for this gene. [provided by RefSeq, Oct 2013]
