CHST8 (NM_001127896) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: CHST8 (NM_001127896) Human Tagged ORF Clone Lentiviral Particle

Symbol: CHST8

Synonyms: GalNAc4ST; GALNAC4ST1; PSS3

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001127896

ORF Size: 1272 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC225690).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001127896.1</u>

 RefSeq Size:
 2251 bp

 RefSeq ORF:
 1275 bp

 Locus ID:
 64377

 UniProt ID:
 Q9H2A9

Cytogenetics: 19q13.11

Protein Families: Transmembrane

MW: 48.8 kDa

Gene Summary:

The protein encoded by this gene belongs to the sulfotransferase 2 family. It is predominantly expressed in the pituitary gland, and is localized to the golgi membrane. This protein catalyzes the transfer of sulfate to position 4 of non-reducing N-acetylgalactosamine (GalNAc) residues in both N-glycans and O-glycans. It is responsible for sulfation of GalNAc on luteinizing hormone (LH), which is required for production of the sex hormones. Mice lacking this enzyme, exhibit increased levels of circulating LH, and precocious sexual maturation of both male and female mice. Alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Aug 2011]
