

## Product datasheet for RC225692L3

## Paxillin (PXN) (NM\_025157) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Tag: Myc-DDK

Symbol: Paxillin

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC225692).

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:**

<sup>\*</sup> The last codon before the Stop codon of the ORF.

## Paxillin (PXN) (NM\_025157) Human Tagged Lenti ORF Clone | RC225692L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

**RefSeq:** <u>NM\_025157.3</u>

RefSeq ORF: 1275 bp

**Locus ID:** 5829

**UniProt ID:** <u>P49023</u>

Cytogenetics: 12q24.23

**Protein Families:** Druggable Genome, Stem cell - Pluripotency

**Protein Pathways:** Chemokine signaling pathway, Focal adhesion, Leukocyte transendothelial migration,

Regulation of actin cytoskeleton, VEGF signaling pathway

**MW:** 46.4 kDa

Gene Summary: This gene encodes a cytoskeletal protein involved in actin-membrane attachment at sites of

cell adhesion to the extracellular matrix (focal adhesion). Alternatively spliced transcript

variants encoding different isoforms have been described for this gene. These isoforms exhibit

different expression pattern, and have different biochemical, as well as physiological

properties (PMID:9054445). [provided by RefSeq, Aug 2011]
