BIGM103 (SLC39A8) (NM 001135147) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: BIGM103 (SLC39A8) (NM_001135147) Human Tagged ORF Clone Lentiviral Particle

Symbol: BIGM103

Synonyms: BIGM103; CDG2N; LZT-Hs6; PP3105; ZIP8

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_001135147

ORF Size: 1332 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC225728).

Sequence:

Cytogenetics:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001135147.1, NP 001128619.1

4q24

 RefSeq ORF:
 1335 bp

 Locus ID:
 64116

 UniProt ID:
 Q9C0K1

Protein Families: Transmembrane

MW: 47.9 kDa

Gene Summary:

This gene encodes a member of the SLC39 family of solute-carrier genes, which show structural characteristics of zinc transporters. The encoded protein is glycosylated and found in the plasma membrane and mitochondria, and functions in the cellular import of zinc at the onset of inflammation. It is also thought to be the primary transporter of the toxic cation cadmium, which is found in cigarette smoke. Multiple transcript variants encoding different isoforms have been found for this gene. Additional alternatively spliced transcript variants of this gene have been described, but their full-length nature is not known. [provided by RefSeq, Oct 2008]
