GABA A Receptor alpha 1 (GABRA1) (NM_001127648) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: GABA A Receptor alpha 1

Synonyms: DEE19; ECA4; EIEE19; EJM; EJM5

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC225759).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

			Kozak Consensus	
EcoR I	BamH I	RBS	Sgf I	ORF
CTATAGGGCGGCCGGGAATTCGTC	GACTGGATCCG	GTACCGAGGAGATCTG	CCGCCGCGATCGC C A	TG
	Mlul	Not I Xho I	mGFP Tag	
NNÑ	ACG CGT ACG	CGG CCG CTC GAG	ATG AGC GGG GGC	
	TRT	RPLE	M S G G	<u> </u>
GGA CTC AGA GTT TGG	G GTA GGA AGC			

 $[\]ensuremath{^{*}}$ The last codon before the Stop codon of the ORF.

ACCN: NM_001127648

ORF Size: 1368 bp

GABA A Receptor alpha 1 (GABRA1) (NM_001127648) Human Tagged Lenti ORF Clone | RC225759L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_001127648.1</u>

RefSeq ORF: 1371 bp

Locus ID: 2554

UniProt ID: <u>P14867</u>

Cytogenetics: 5q34

Protein Families: Druggable Genome, Ion Channels: Cys-loop Receptors, Transmembrane

Protein Pathways: Neuroactive ligand-receptor interaction

MW: 51.6 kDa

Gene Summary: This gene encodes a gamma-aminobutyric acid (GABA) receptor. GABA is the major inhibitory

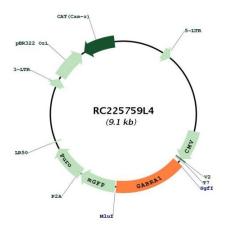

neurotransmitter in the mammalian brain where it acts at GABA-A receptors, which are ligand-gated chloride channels. Chloride conductance of these channels can be modulated by agents such as benzodiazepines that bind to the GABA-A receptor. GABA-A receptors are pentameric, consisting of proteins from several subunit classes: alpha, beta, gamma, delta and rho. Mutations in this gene cause juvenile myoclonic epilepsy and childhood absence

epilepsy type 4. Multiple transcript variants encoding the same protein have been identified for

this gene. [provided by RefSeq, Jul 2008]
