| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |

| Gene Summary:          | This gene encodes a nuclear hormone receptor characterized by a highly conserved DNA<br>binding domain (DBD), a variable hinge region, and a carboxy-terminal ligand binding domain<br>(LBD) that is typical for all members of the steroid/thyroid hormone receptor superfamily.<br>This protein also belongs to a large family of ligand-inducible transcription factors that<br>regulate gene expression by binding to specific DNA sequences within promoters of target<br>genes. Multiple alternatively spliced transcript variants have been described, but the full-<br>length nature of some of these variants has not been determined. [provided by RefSeq, Jul<br>2008] |
