OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Gene Summary: This gene encodes a cell division cycle protein with kinase activity that is critical for the G1/S

transition. The yeast homolog is also essential for initiation of DNA replication as cell division

occurs. Overexpression of this gene product may be associated with neoplastic

transformation for some tumors. Multiple alternatively spliced transcript variants that

encode the same protein have been detected. [provided by RefSeq, Aug 2008]
