	CD18 (ITGB2) (NM_001127491) Human Tagged ORF Clone Lentiviral Particle – RC226157L4V
MW:	84.78 kDa
Gene Summary:	This gene encodes an integrin beta chain, which combines with multiple different alpha chains to form different integrin heterodimers. Integrins are integral cell-surface proteins that participate in cell adhesion as well as cell-surface mediated signalling. The encoded protein plays an important role in immune response and defects in this gene cause leukocyte adhesion deficiency. Alternative splicing results in multiple transcript variants.
