# Product datasheet for RC226397L4

## NMDAR2A (GRIN2A) (NM\_001134407) Human Tagged Lenti ORF Clone

### **Product data:**

Product Type:	Expression Plasmids
Product Name:	NMDAR2A (GRIN2A) (NM_001134407) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	NMDAR2A
Synonyms:	EPND; FESD; GluN2A; LKS; NMDAR2A; NR2A
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC226397).
<b>Restriction Sites:</b>	Sgfl-Notl
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Not I           GCG ATC GCC         ATG// NNN         AC G CGG CCG C TC

ACCN: ORF Size: NM\_001134407 4392 bp

	NMDAR2A (GRIN2A) (NM_001134407) Human Tagged Lenti ORF Clone – RC226397L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	<ul> <li>thod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 001134407.1</u>
RefSeq ORF:	4395 bp
Locus ID:	2903
UniProt ID:	<u>Q12879</u>
Cytogenetics:	16p13.2
Protein Families:	Druggable Genome, Ion Channels: Glutamate Receptors, Ion Channels: Sodium, Transmembrane
Protein Pathways:	Alzheimer's disease, Amyotrophic lateral sclerosis (ALS), Calcium signaling pathway, Long- term potentiation, Neuroactive ligand-receptor interaction, Systemic lupus erythematosus
MW:	165.28 kDa

### Serigene NMDAR2A (GRIN2A) (NM\_001134407) Human Tagged Lenti ORF Clone – RC226397L4

# Gene Summary:This gene encodes a member of the glutamate-gated ion channel protein family. The encoded<br/>protein is an N-methyl-D-aspartate (NMDA) receptor subunit. NMDA receptors are both<br/>ligand-gated and voltage-dependent, and are involved in long-term potentiation, an activity-<br/>dependent increase in the efficiency of synaptic transmission thought to underlie certain<br/>kinds of memory and learning. These receptors are permeable to calcium ions, and activation<br/>results in a calcium influx into post-synaptic cells, which results in the activation of several<br/>signaling cascades. Disruption of this gene is associated with focal epilepsy and speech<br/>disorder with or without cognitive disability. Alternative splicing results in multiple transcript<br/>variants. [provided by RefSeq, May 2014]
