

### Product datasheet for RC226500L4

## Aph 1b (APH1B) (NM\_001145646) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Tag: mGFP

Symbol: Aph lb

Synonyms: APH-1B; PRO1328; PSFL; TAAV688

Mammalian Cell Puromycin

Selection:

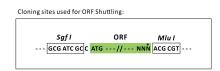

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

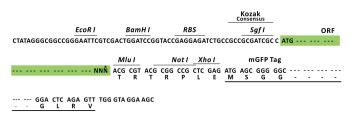

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC226500).

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_001145646

ORF Size: 648 bp

## Aph lb (APHIB) (NM\_001145646) Human Tagged Lenti ORF Clone | RC226500L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

**RefSeq:** <u>NM\_001145646.1</u>, <u>NP\_001139118.1</u>

RefSeq ORF: 651 bp

Locus ID: 83464

UniProt ID: Q8WW43

Cytogenetics: 15q22.2

**Protein Families:** Transmembrane

**MW:** 24.1 kDa

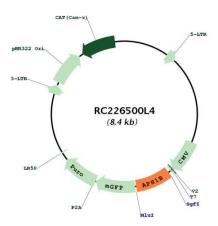

Gene Summary: This gene encodes a multi-pass transmembrane protein that is a functional component of the

gamma-secretase complex, which also contains presentlin and nicastrin. This protein represents a stabilizing cofactor for the presentlin holoprotein in the complex. The gamma-secretase complex catalyzes the cleavage of integral proteins such as notch receptors and

beta-amyloid precursor protein. [provided by RefSeq, Sep 2011]
