Gene Summary:Transcriptional repressor which preferentially binds to the GC-rich consensus sequence (5'-<br/>AGCCCCGGCG-3') and may regulate expression of TNF, EGFR and PDGFA. May control<br/>smooth muscle cells proliferation following artery injury through PDGFA repression. May also<br/>bind double-stranded RNA. Positively regulates Toll-like receptor (TLR) signaling in response<br/>to agonist probably by competing with the negative FLII regulator for MYD88-binding.<br/>[UniProtKB/Swiss-Prot Function]
