

Product datasheet for RC226613L4

FZR1 (NM_001136197) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids Product Name: FZR1 (NM 001136197) Human Tagged Lenti ORF Clone Tag: mGFP Symbol: FZR1 Synonyms: CDC20C; CDH1; FZR; FZR2; HCDH; HCDH1 **Mammalian Cell** Puromycin Selection: Vector: pLenti-C-mGFP-P2A-Puro (PS100093) E. coli Selection: Chloramphenicol (34 ug/mL) The ORF insert of this clone is exactly the same as(RC226613). **ORF** Nucleotide Sequence: **Restriction Sites:** Sgfl-Rsrll **Cloning Scheme:** Cloning sites used for ORF Shuttling: ORF Sqf I Rsr II ---- GCG ATC GC C ATG --- // --- NNN AG C GGA CCG --

ACCN: ORF Size: NM_001136197 1212 bp

Service Price FZR1 (NM_001136197) Human Tagged Lenti ORF Clone – RC226613L4	
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	 thod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 001136197.1, NP 001129669.1</u>
RefSeq ORF:	1215 bp
Locus ID:	51343
UniProt ID:	<u>Q9UM11</u>
Cytogenetics:	19p13.3
Protein Families:	Druggable Genome
Protein Pathways:	Cell cycle, Progesterone-mediated oocyte maturation, Ubiquitin mediated proteolysis
MW:	44.7 kDa
Gene Summary:	Substrate-specific adapter for the anaphase promoting complex/cyclosome (APC/C) E3 ubiquitin-protein ligase complex. Associates with the APC/C in late mitosis, in replacement of CDC20, and activates the APC/C during anaphase and telophase. The APC/C remains active in degrading substrates to ensure that positive regulators of the cell cycle do not accumulate prematurely. At the G1/S transition FZR1 is phosphorylated, leading to its dissociation from the APC/C. Following DNA damage, it is required for the G2 DNA damage checkpoint: its dephosphorylation and reassociation with the APC/C leads to the ubiquitination of PLK1, preventing entry into mitosis. Acts as an adapter for APC/C to target the DNA-end resection factor RBBP8/CtIP for ubiquitination and subsequent proteasomal degradation. Through the regulation of RBBP8/CtIP protein turnover, may play a role in DNA damage response, favoring DNA double-strand repair through error-prone non-homologous end joining (NHEJ) over error-free, RBBP8-mediated homologous recombination (HR) (PubMed:25349192).
