OTUD5 (NM_001136159) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: OTUD5 (NM_001136159) Human Tagged ORF Clone Lentiviral Particle

Symbol: OTUD5

Synonyms: DUBA; MCAND

Mammalian Cell

Puromycin

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001136159

ORF Size: 1047 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC226729).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 001136159.1

RefSeq ORF: 1050 bp
Locus ID: 55593
UniProt ID: Q96G74
Cytogenetics: Xp11.23
Protein Families: Protease

Protein Pathways: RIG-I-like receptor signaling pathway

MW: 39 kDa

Gene Summary:

This gene encodes a member of the OTU (ovarian tumor) domain-containing cysteine protease superfamily. The OTU domain confers deubiquitinase activity and the encoded protein has been shown to suppress the type I interferon-dependent innate immune response by cleaving the polyubiquitin chain from an essential type I interferon adaptor protein. Cleavage results in disassociation of the adaptor protein from a downstream signaling complex and disruption of the type I interferon signaling cascade. Alternatively spliced transcript variants encoding different isoforms have been described. [provided by RefSeq, Oct 2008]
