Product datasheet for RC226744L4V

PABPC4 (NM_001135653) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	PABPC4 (NM_001135653) Human Tagged ORF Clone Lentiviral Particle
Symbol:	PABPC4
Synonyms:	APP-1; APP1; iPABP; PABP4
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001135653
ORF Size:	1980 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC226744).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001135653.1, NP 001129125.1</u>
RefSeq ORF:	1983 bp
Locus ID:	8761
UniProt ID:	<u>Q13310</u>
Cytogenetics:	1p34.3
MW:	72.2 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

PABPC4 (NM_001135653) Human Tagged ORF Clone Lentiviral Particle - RC226744L4V

Gene Summary:Poly(A)-binding proteins (PABPs) bind to the poly(A) tail present at the 3-prime ends of most
eukaryotic mRNAs. PABPC4 or IPABP (inducible PABP) was isolated as an activation-induced T-
cell mRNA encoding a protein. Activation of T cells increased PABPC4 mRNA levels in T cells
approximately 5-fold. PABPC4 contains 4 RNA-binding domains and proline-rich C terminus.
PABPC4 is localized primarily to the cytoplasm. It is suggested that PABPC4 might be
necessary for regulation of stability of labile mRNA species in activated T cells. PABPC4 was
also identified as an antigen, APP1 (activated-platelet protein-1), expressed on thrombin-
activated rabbit platelets. PABPC4 may also be involved in the regulation of protein
translation in platelet and megakaryocytes or may participate in the binding or stabilization
of polyadenylates in platelet dense granules. Alternatively spliced transcript variants
encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2008]
