## LSS (NM\_001145437) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** LSS (NM\_001145437) Human Tagged ORF Clone Lentiviral Particle

Symbol: LSS

Synonyms: APMR4; CTRCT44; HYPT14; OSC

**Mammalian Cell** 

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_001145437

ORF Size: 1956 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC226745).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** NM 001145437.1, NP 001138909.1

 RefSeq Size:
 4390 bp

 RefSeq ORF:
 1959 bp

 Locus ID:
 4047

 UniProt ID:
 P48449

Cytogenetics: 21q22.3

**Protein Families:** Druggable Genome

**Protein Pathways:** Metabolic pathways, Steroid biosynthesis

## LSS (NM\_001145437) Human Tagged ORF Clone Lentiviral Particle - RC226745L3V

**MW:** 74.2 kDa

**Gene Summary:** The protein encoded by this gene catalyzes the conversion of (S)-2,3 oxidosqualene to

lanosterol. The encoded protein is a member of the terpene cyclase/mutase family and catalyzes the first step in the biosynthesis of cholesterol, steroid hormones, and vitamin D. Alternative splicing results in multiple transcript variants encoding different isoforms.
