CROT (NM_001143935) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CROT (NM_001143935) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: CROT

Synonyms: COT

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC226801).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_001143935

ORF Size: 1920 bp

CROT (NM_001143935) Human Tagged Lenti ORF Clone - RC226801L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001143935.1</u>

 RefSeq ORF:
 1923 bp

 Locus ID:
 54677

 UniProt ID:
 Q9UKG9

 Cytogenetics:
 7q21.12

Protein Families: Druggable Genome

MW: 73.2 kDa

Gene Summary: This gene encodes a member of the carnitine/choline acetyltransferase family. The encoded

protein converts 4,8-dimethylnonanoyl-CoA to its corresponding carnitine ester. This transesterification occurs in the peroxisome and is necessary for transport of medium- and long- chain acyl-CoA molecules out of the peroxisome to the cytosol and mitochondria. The

protein thus plays a role in lipid metabolism and fatty acid beta-oxidation. Alternatively

spliced transcript variants have been described.[provided by RefSeq, Jan 2009]
