## Product datasheet for RC226816L2V

## CRF1 (CRHR1) (NM\_001145146) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	CRF1 (CRHR1) (NM_001145146) Human Tagged ORF Clone Lentiviral Particle
Symbol:	CRF1
Synonyms:	CRF-R; CRF-R-1; CRF-R1; CRF1; CRFR-1; CRFR1; CRH-R-1; CRH-R1; CRHR; CRHR1L
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
Tag:	mGFP
ACCN:	NM_001145146
ORF Size:	1332 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC226816).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001145146.1</u>
RefSeq ORF:	1335 bp
Locus ID:	1394
UniProt ID:	<u>P34998</u>
Cytogenetics:	17q21.31
Protein Families:	Druggable Genome, GPCR, Transmembrane
Protein Pathways:	Long-term depression, Neuroactive ligand-receptor interaction
MW:	50.5 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

ORIGENE	CRF1 (CRHR1) (NM_001145146) Human Tagged ORF Clone Lentiviral Particle – RC226816L2V
---------	--

Gene Summary:This gene encodes a G-protein coupled receptor that binds neuropeptides of the<br/>corticotropin releasing hormone family that are major regulators of the hypothalamic-<br/>pituitary-adrenal pathway. The encoded protein is essential for the activation of signal<br/>transduction pathways that regulate diverse physiological processes including stress,<br/>reproduction, immune response and obesity. Alternative splicing results in multiple transcript<br/>variants. Naturally-occurring readthrough transcription between this gene and upstream<br/>GeneID:147081 results in transcripts that encode isoforms that share similarity with the<br/>products of this gene. [provided by RefSeq, Aug 2016]
