

Product datasheet for RC226831L2

RFX8 (NM_001145664) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: RFX8

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC226831).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

The diagram shows a DNA sequence with a *SgfI* site (GCG), an open reading frame (ORF) starting with ATG, and an *MluI* site (ACG). The sequence is flanked by dashed lines on the left and right.

The diagram illustrates the pMFP1 vector structure. At the top, the Kozak Consensus sequence (ATG) is shown in green. Below it, the vector backbone contains several restriction sites: EcoRI, BamHI, RBS, SgfI, and ORF. The RBS and SgfI sites are in blue. The ORF region is in green. A unique restriction site, *Mlu*I, is located between the RBS and SgfI sites. Below the backbone, the *Mlu*I site is shown with its restriction sites (ACG, CGT, T, R) and the *Not*I site (ACG, CGG, CCG, P, L, CTC, GAG, E). The *Xba*I site is also indicated. The mGFP Tag is shown in green, with its restriction sites (ATG, AGC, GGG, GGC, M, S, G, G) and a stop codon (TAA) indicated. Below the vector backbone, the *Pme*I site is shown with its restriction sites (GGA, CTC, AGA, TAA, GTT, TAA, ACGGCCGGCCGG, Stop, G, L, R).

* The last codon before the Stop codon of the ORF.

ACCN: NM_001145664

ORF Size: 1419 bp

OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.
RefSeq:	NM_001145664.1 , NP_001139136.1
RefSeq ORF:	1422 bp
Locus ID:	731220
UniProt ID:	Q6ZV50
Cytogenetics:	2q11.2
MW:	53.5 kDa
Gene Summary:	May be a transcription factor. [UniProtKB/Swiss-Prot Function]
