# Coatomer subunit delta (ARCN1) (NM\_001142281) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Tag: Myc-DDK

Symbol: Coatomer subunit delta

Synonyms: COPD; SRMMD

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC227118).

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:**

st The last codon before the Stop codon of the ORF.

**ACCN:** NM\_001142281

ORF Size: 1269 bp

### Coatomer subunit delta (ARCNI) (NM\_001142281) Human Tagged Lenti ORF Clone | RC227118L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

**RefSeq:** <u>NM\_001142281.1, NP\_001135753.1</u>

RefSeq ORF: 1272 bp

Locus ID: 372

UniProt ID: <u>P48444</u>

Cytogenetics: 11q23.3

**MW:** 47 kDa

Gene Summary: This gene maps in a region, which include the mixed lineage leukemia and Friend leukemia

virus integration 1 genes, where multiple disease-associated chromosome translocations occur. It is an intracellular protein. Archain sequences are well conserved among eukaryotes and this protein may play a fundamental role in eukaryotic cell biology. It has similarities to heat shock proteins and clathrin-associated proteins, and may be involved in vesicle structure

or trafficking. [provided by RefSeq, Jul 2008]
