DOK3 (NM_001144876) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: DOK3 (NM_001144876) Human Tagged ORF Clone Lentiviral Particle

Symbol: DOK3
Synonyms: DOKL

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001144876

ORF Size: 684 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC227453).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 001144876.1

 RefSeq ORF:
 687 bp

 Locus ID:
 79930

 UniProt ID:
 Q7L591

 Cytogenetics:
 5q35.3

Protein Families: Druggable Genome

MW: 24.6 kDa

Gene Summary:

DOK proteins are enzymatically inert adaptor or scaffolding proteins. They provide a docking platform for the assembly of multimolecular signaling complexes. DOK3 is a negative regulator of JNK signaling in B-cells through interaction with INPP5D/SHIP1. May modulate ABL1 function (By similarity).[UniProtKB/Swiss-Prot Function]
