

Product datasheet for RC227561L4

SLITRK2 (NM_001144010) Human Tagged Lenti ORF Clone

Product data:

| Product Type: | Expression Plasmids |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Product Name: | SLITRK2 (NM_001144010) Human Tagged Lenti ORF Clone |
| Tag: | mGFP |
| Symbol: | SLITRK2 |
| Synonyms: | CXorf1; CXorf2; SLITL1; TMEM257 |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-mGFP-P2A-Puro (PS100093) |
| E. coli Selection: | Chloramphenicol (34 ug/mL) |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC227561). |
| Restriction Sites: | Sgfl-Mlul |
| Cloning Scheme: | |
| | Cloning sites used for ORF Shuttling: Sgf I ORF Mlu I GCG ATC GC ATG// NNN ACG CGT |

* The last codon before the Stop codon of the ORF.

Plasmid Map:

| ACCN: | NM_001144010 |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORF Size: | 2535 bp |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| Components: | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). |
| Reconstitution Method: | Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. |
| RefSeq: | <u>NM 001144010.2, NP 001137482.1</u> |
| RefSeq Size: | 4144 bp |
| RefSeq ORF: | 2538 bp |

| | SLITRK2 (NM_001144010) Human Tagged Lenti ORF Clone – RC227561L4 |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Locus ID: | 84631 |
| UniProt ID: | <u>Q9H156</u> |
| Cytogenetics: | Xq27.3 |
| Protein Families: | Transmembrane |
| MW: | 95.4 kDa |
| Gene Summary: | This gene encodes an integral membrane protein that contains two N-terminal leucine-rich repeats domains and contains C-terminal regions similar to neurotrophin receptors. The encoded protein may play a role in modulating neurite activity. Alternatively spliced transcript variants encoding the same protein have been described.[provided by RefSeq, Feb 2010] |
