## Product datasheet for RC227786L3V

## WDR79 (WRAP53) (NM\_001143992) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	WDR79 (WRAP53) (NM_001143992) Human Tagged ORF Clone Lentiviral Particle
Symbol:	WDR79
Synonyms:	DKCB3; TCAB1; WDR79
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_001143992
ORF Size:	1644 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC227786).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001143992.1</u>
RefSeq Size:	1896 bp
RefSeq ORF:	1647 bp
Locus ID:	55135
UniProt ID:	Q9BUR4
Cytogenetics:	17p13.1
MW:	59.3 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Gene Summary:This gene encodes an essential component of the telomerase holoenzyme complex, a<br/>ribonucleoprotein complex required for telomere synthesis. This protein is enriched in Cajal<br/>bodies, nuclear sites of RNP processing that are important for telomerase function. It<br/>interacts with dyskerin, TERT and TERC, other components of active telomerase, and with<br/>small Cajal body RNAs (scaRNAs), which are involved in modifying splicing RNAs. This mRNA<br/>also functions as a p53 antisense transcript, that regulates endogenous p53 mRNA levels and<br/>further induction of p53 protein by targeting the 5' untranslated region of p53 mRNA.<br/>Alternatively spliced transcript variants which differ only in the 5' UTR have been found for<br/>this gene. [provided by RefSeq, Mar 2011]
