

Product datasheet for RC227878L3V

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

MX1 (NM_001144925) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: MX1 (NM 001144925) Human Tagged ORF Clone Lentiviral Particle

Symbol: MX1

Synonyms: IFI-78K; IFI78; IncMX1-215; MX; MxA

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_001144925

ORF Size: 1986 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC227878).

OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional

amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

<u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001144925.1, NP 001138397.1

RefSeq ORF: 1989 bp **Locus ID:** 4599

MX1 (NM_001144925) Human Tagged ORF Clone Lentiviral Particle - RC227878L3V

UniProt ID: P20591

Cytogenetics: 21q22.3

Protein Families: Druggable Genome

MW: 75.3 kDa

Gene Summary: This gene encodes a guanosine triphosphate (GTP)-metabolizing protein that participates in

the cellular antiviral response. The encoded protein is induced by type I and type II

interferons and antagonizes the replication process of several different RNA and DNA viruses. There is a related gene located adjacent to this gene on chromosome 21, and there are multiple pseudogenes located in a cluster on chromosome 4. Alternative splicing results in

multiple transcript variants. [provided by RefSeq, Sep 2013]
