Gene Summary:This gene encodes a member of the four-and-a-half-LIM-only protein family. Family members
contain two highly conserved, tandemly arranged, zinc finger domains with four highly
conserved cysteines binding a zinc atom in each zinc finger. Expression of these family
members occurs in a cell- and tissue-specific mode and these proteins are involved in many
cellular processes. Mutations in this gene have been found in patients with Emery-Dreifuss
muscular dystrophy. Multiple alternately spliced transcript variants which encode different
protein isoforms have been described.[provided by RefSeq, Nov 2009]
