Guanylate kinase (GUK1) (NM_001159390) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Guanylate kinase (GUK1) (NM_001159390) Human Tagged ORF Clone

Tag: Myc-DDK

Symbol: Guanylate kinase

Synonyms: GMK

Mammalian Cell Neomycin

Selection:

Vector: pCMV6-Entry (PS100001)

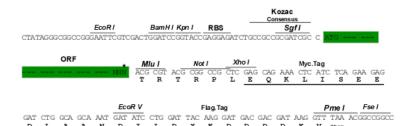

E. coli Selection: Kanamycin (25 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM 001159390

ORF Size: 654 bp

Guanylate kinase (GUK1) (NM_001159390) Human Tagged ORF Clone - RC228149

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001159390.1</u>, <u>NP 001152862.1</u>

RefSeq ORF: 657 bp Locus ID: 2987

UniProt ID: Q16774

Cytogenetics: 1q42.13

Protein Families: Druggable Genome

Protein Pathways: Metabolic pathways, Purine metabolism

MW: 23.6 kDa

Gene Summary: The protein encoded by this gene is an enzyme that catalyzes the transfer of a phosphate

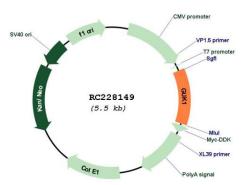

group from ATP to guanosine monophosphate (GMP) to form guanosine diphosphate (GDP). The encoded protein is thought to be a good target for cancer chemotherapy. Several

transcript variants encoding different isoforms have been found for this gene. [provided by

RefSeq, Jun 2011]
