## Product datasheet for RC228255L2V

## FHL1 (NM\_001159702) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                       | Lentiviral Particles  |
|-------------------------------------|---|
| Product Name:                       | FHL1 (NM_001159702) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                             | FHL1  |
| Synonyms:                           | FCMSU; FHL-1; FHL1A; FHL1B; FLH1A; KYOT; RBMX1A; RBMX1B; SLIM; SLIM-1; SLIM1;<br>SLIMMER; XMPMA   |
| Mammalian Cell<br>Selection:        | None  |
| Vector:                             | pLenti-C-mGFP (PS100071)  |
| Tag:                                | mGFP  |
| ACCN:                               | NM_001159702  |
| ORF Size:                           | 969 bp  |
| ORF Nucleotide<br>Sequence:         | The ORF insert of this clone is exactly the same as(RC228255).  |
| OTI Disclaimer:                     | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through   |
|                                     | naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:                     | naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing  |
| OTI Annotation:<br>RefSeq:          | naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u><br>This clone was engineered to express the complete ORF with an expression tag. Expression   |
|                                     | naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u><br>This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |

Gene Summary:This gene encodes a member of the four-and-a-half-LIM-only protein family. Family members<br/>contain two highly conserved, tandemly arranged, zinc finger domains with four highly<br/>conserved cysteines binding a zinc atom in each zinc finger. Expression of these family<br/>members occurs in a cell- and tissue-specific mode and these proteins are involved in many<br/>cellular processes. Mutations in this gene have been found in patients with Emery-Dreifuss<br/>muscular dystrophy. Multiple alternately spliced transcript variants which encode different<br/>protein isoforms have been described.[provided by RefSeq, Nov 2009]
