The ORF insert of this clone is exactly the same as(RC228404).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

| Gene Summary: | This gene encodes a high mobility group (HMG) box-containing transcription factor that plays <br> a key role in the Wnt signaling pathway. The protein has been implicated in blood glucose <br> homeostasis. Genetic variants of this gene are associated with increased risk of type 2 <br> diabetes. Several transcript variants encoding multiple different isoforms have been found <br> for this gene.[provided by RefSeq, Oct 2010] |
