TULP3 (NM_001160408) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TULP3 (NM_001160408) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: TULP3
Synonyms: TUBL3
Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC228415).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001160408

ORF Size: 1503 bp

TULP3 (NM_001160408) Human Tagged Lenti ORF Clone - RC228415L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001160408.1</u>

 RefSeq ORF:
 1506 bp

 Locus ID:
 7289

 UniProt ID:
 075386

Cytogenetics: 12p13.33

Protein Families: Druggable Genome, Transcription Factors

MW: 56.4 kDa

Gene Summary: This gene encodes a member of the tubby gene family of bipartite transcription factors.

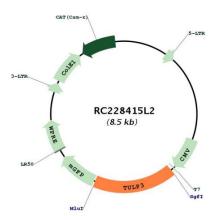

Members of this family have been identified in plants, vertebrates, and invertebrates, and they share a conserved N-terminal transcription activation region and a conserved C-terminal DNA and phosphatidylinositol-phosphate binding region. The encoded protein binds to phosphoinositides in the plasma membrane via its C-terminal region and probably functions as a membrane-bound transcription regulator that translocates to the nucleus in response to phosphoinositide hydrolysis, for instance, induced by G-protein-coupled-receptor signaling. It

encoding distinct isoforms have been identified for this gene. [provided by RefSeq, May 2009]

plays an important role in neuronal development and function. Two transcript variants
