# Product datasheet for RC228816L3

#### Kir6.2 (KCNJ11) (NM\_001166290) Human Tagged Lenti ORF Clone

## **Product data:**

Product Type:	Expression Plasmids
Product Name:	Kir6.2 (KCNJ11) (NM_001166290) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	Kir6.2
Synonyms:	BIR; HHF2; IKATP; KIR6.2; MODY13; PHHI; PNDM2; TNDM3
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC228816).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgfi ORF Miui

---- GCG ATC GC ATG ---- //--- NNN ACG CGT ----

ACCN: ORF Size: NM\_001166290 909 bp

of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ througi naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More infoOTI Annotation:This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.Components:The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).Reconstitution Method:1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liqui at the bottom.		(ir6.2 (KCNJ11) (NM_001166290) Human Tagged Lenti ORF Clone – RC228816L3

#### Scrigene Kir6.2 (KCNJ11) (NM\_001166290) Human Tagged Lenti ORF Clone – RC228816L3 Kir6.2 (KCNJ11) (NM\_001166290) Human Tagged Lenti ORF Clone – RC228816L3

Gene Summary:Potassium channels are present in most mammalian cells, where they participate in a wide<br/>range of physiologic responses. The protein encoded by this gene is an integral membrane<br/>protein and inward-rectifier type potassium channel. The encoded protein, which has a<br/>greater tendency to allow potassium to flow into a cell rather than out of a cell, is controlled<br/>by G-proteins and is found associated with the sulfonylurea receptor SUR. Mutations in this<br/>gene are a cause of familial persistent hyperinsulinemic hypoglycemia of infancy (PHHI), an<br/>autosomal recessive disorder characterized by unregulated insulin secretion. Defects in this<br/>gene may also contribute to autosomal dominant non-insulin-dependent diabetes mellitus<br/>type II (NIDDM), transient neonatal diabetes mellitus type 3 (TNDM3), and permanent<br/>neonatal diabetes mellitus (PNDM). Multiple alternatively spliced transcript variants that<br/>encode different protein isoforms have been described for this gene. [provided by RefSeq,<br/>Oct 2009]
