Perilipin 3 (PLIN3) (NM_001164189) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Perilipin 3 (PLIN3) (NM_001164189) Human Tagged ORF Clone

Tag: Myc-DDK
Symbol: Perilipin 3

Synonyms: M6PRBP1; PP17; TIP47

Mammalian Cell Neomycin

Selection:

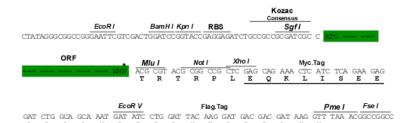

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

Cloning sites used for ORF Shuttling:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM 001164189

ORF Size: 1299 bp

Perilipin 3 (PLIN3) (NM_001164189) Human Tagged ORF Clone - RC228896

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001164189.2</u>

 RefSeq Size:
 2342 bp

 RefSeq ORF:
 1302 bp

 Locus ID:
 10226

 UniProt ID:
 060664

Cytogenetics: 19p13.3

Protein Families: Druggable Genome

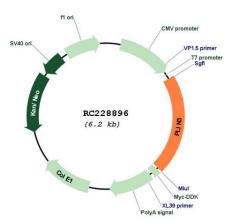

MW: 46.9 kDa

Gene Summary: Mannose 6-phophate receptors (MPRs) deliver lysosomal hydrolase from the Golgi to

endosomes and then return to the Golgi complex. The protein encoded by this gene interacts with the cytoplasmic domains of both cation-independent and cation-dependent MPRs, and is required for endosome-to-Golgi transport. This protein also binds directly to the GTPase RAB9 (RAB9A), a member of the RAS oncogene family. The interaction with RAB9 has been shown to increase the affinity of this protein for its cargo. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2009]
