Cloning Scheme:

## Expression Plasmids

Cannabinoid Receptor I (CNR1) (NM_001160258) Human Tagged Lenti ORF Clone mGFP
Cannabinoid Receptor I
CANN6; CB-R; CB1; CB1A; CB1K5; CB1R; CNR
Puromycin
pLenti-C-mGFP-P2A-Puro (PS100093)
Chloramphenicol ( $34 \mathrm{ug} / \mathrm{mL}$ )
The ORF insert of this clone is exactly the same as(RC228916).

## Sgfl-Mlul

OTI Disclaimer:

OTI Annotation:

Reconstitution Method:

NM_001160258
1416 bp
The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube
This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

1. Centrifuge at $5,000 \mathrm{xg}$ for 5 min .
2. Carefully open the tube and add 100 ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000 xg ) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at $-20^{\circ} \mathrm{C}$. The DNA is stable for at least one year from date of shipping when stored at $-20^{\circ} \mathrm{C}$.

1419 bp
Locus ID: ..... 1268
UniProt ID: ..... P21554
Cytogenetics: ..... 6q15
Protein Families: Druggable Genome, GPCR, TransmembraneProtein Pathways:
Neuroactive ligand-receptor interaction
MW:
Gene Summary:
52.9 kDa
This gene encodes one of two cannabinoid receptors. The cannabinoids, principally delta-9-tetrahydrocannabinol and synthetic analogs, are psychoactive ingredients of marijuana. Thecannabinoid receptors are members of the guanine-nucleotide-binding protein (G-protein)coupled receptor family, which inhibit adenylate cyclase activity in a dose-dependent,stereoselective and pertussis toxin-sensitive manner. The two receptors have been found tobe involved in the cannabinoid-induced CNS effects (including alterations in mood andcognition) experienced by users of marijuana. Multiple transcript variants encoding twodifferent protein isoforms have been described for this gene. [provided by RefSeq, May 2009]
