Gene Summary:This gene encodes a member of the solute carrier family 6 protein family which transports<br/>neutral amino acids. The encoded protein is thought to play a role in neuronal amino acid<br/>transport (PMID: 16185194) and may be associated with major depression (PMID: 21521612).<br/>Multiple transcript variants encoding different isoforms have been found for this gene.<br/>[provided by RefSeq, Feb 2012]
