Product datasheet for RC229052

EIF4ENIF1 (NM_001164501) Human Tagged ORF Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	EIF4ENIF1 (NM_001164501) Human Tagged ORF Clone
Tag:	Myc-DDK
Symbol:	EIF4ENIF1
Synonyms:	4E-T; Clast4
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)

ORF Nucleotide Sequence:

>RC229052 ORF sequence
Red=Cloning site Blue=ORF Green=Tags(s)

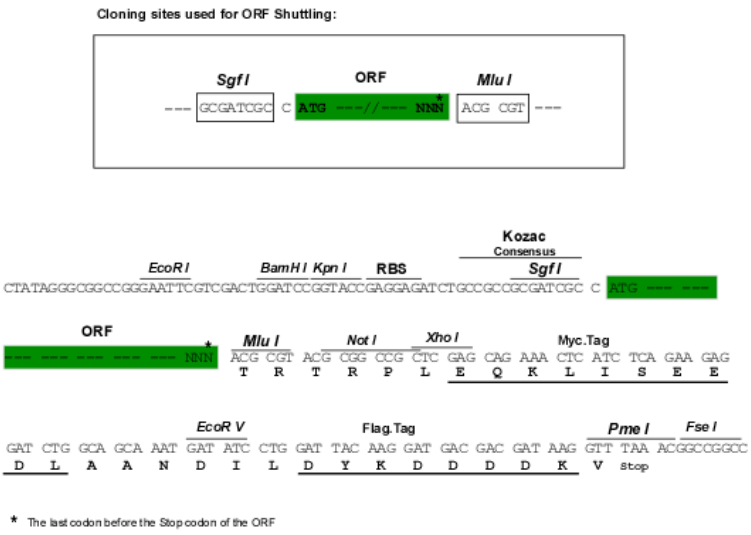
Restriction Sites: SgfI-MluI

Cloning Scheme:



ACCN:	NM_001164501
ORF Size:	2955 bp
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001164501.1, NP_001157973.1
RefSeq Size:	3680 bp
RefSeq ORF:	2958 bp

Locus ID:	56478
UniProt ID:	Q9NRA8
Cytogenetics:	22q12.2
MW:	108.2 kDa
Gene Summary:	The protein encoded by this gene is a nucleocytoplasmic shuttle protein for the translation initiation factor eIF4E. This shuttle protein interacts with the importin alpha-beta complex to mediate nuclear import of eIF4E. It is predominantly cytoplasmic; its own nuclear import is regulated by a nuclear localization signal and nuclear export signals. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2009]
