| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

| Gene Summary: | The protein encoded by this gene is expressed in B lymphocytes and contains pleckstrin<br>homology and src homology 2 (SH2) domains. In Burkitt's lymphoma cell lines, it is tyrosine-<br>phosphorylated in response to B cell receptor stimulation. Because it binds Shc independent<br>of stimulation and Grb2 after stimulation, it appears to play a role in signal transduction from<br>the receptor to the Shc/Grb2 pathway.
