SETMAR (NM_006515) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: SETMAR (NM_006515) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: **SETMAR**

Synonyms: Mar1; METNASE

Mammalian Cell

Selection:

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

Puromycin

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC229337).

Restriction Sites:

Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_006515

ORF Size: 2052 bp

SETMAR (NM_006515) Human Tagged Lenti ORF Clone - RC229337L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006515.3</u>, <u>NP 006506.3</u>

 RefSeq ORF:
 2055 bp

 Locus ID:
 6419

 UniProt ID:
 Q53H47

Cytogenetics:

Domains: SET, Transposase 1, PreSET, Pre-SET

3p26.1

Protein Families: Druggable Genome, Transcription Factors

Protein Pathways: Lysine degradation

MW: 77.9 kDa

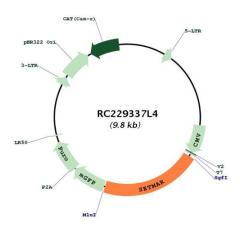

Gene Summary: This gene encodes a fusion protein that contains an N-terminal histone-lysine N-

methyltransferase domain and a C-terminal mariner transposase domain. The encoded protein binds DNA and functions in DNA repair activities including non-homologous end joining and double strand break repair. The SET domain portion of this protein specifically methylates histone H3 lysines 4 and 36. This gene exists as a fusion gene only in anthropoid primates, other organisms lack mariner transposase domain. Alternate splicing results in

multiple transcript variants. [provided by RefSeq, Jan 2013]
