

Product datasheet for RC229598L3V

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

FNDC5 (NM_001171941) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: FNDC5 (NM_001171941) Human Tagged ORF Clone Lentiviral Particle

Symbol: FNDC5

Synonyms: FRCP2; irisin

Mammalian Cell P

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_001171941

ORF Size: 459 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC229598).

Sequence:

OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.

Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

<u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 001171941.1

RefSeq ORF: 462 bp **Locus ID:** 252995

FNDC5 (NM_001171941) Human Tagged ORF Clone Lentiviral Particle - RC229598L3V

UniProt ID: Q8NAU1

Cytogenetics: 1p35.1

Protein Families: Transmembrane

MW: 17.8 kDa

Gene Summary: This gene encodes a secreted protein that is released from muscle cells during exercise. The

encoded protein may participate in the development of brown fat. Translation of the

precursor protein initiates at a non-AUG start codon at a position that is conserved as an AUG start codon in other organisms. Alternative splicing results in multiple transcript variants.
