Gene Summary:This gene belongs to the brain expressed X-linked gene family. The encoded protein interacts
with the transcription factor LIM domain only 2 in a DNA-binding complex that recognizes the
E-box element and promotes transcription. This gene has been found to be a tumor
suppressor that is silenced in human glioma. In breast cancer cells, this gene product
modulates apoptosis in response to estrogen and tamoxifen, and enhances the anti-
proliferative effect of tamoxifen. Multiple transcript variants encoding different isoforms have
been found for this gene. [provided by RefSeq, Dec 2009]
