MDFIC (NM_001166345) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MDFIC (NM_001166345) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: MDFIC

Synonyms: HIC; MDFIC1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC229758).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001166345

ORF Size: 738 bp

MDFIC (NM_001166345) Human Tagged Lenti ORF Clone - RC229758L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001166345.1</u>, <u>NP 001159817.1</u>

 RefSeq ORF:
 741 bp

 Locus ID:
 29969

 UniProt ID:
 Q9P1T7

Cytogenetics: 7q31.1-q31.2

MW: 26.2 kDa

Gene Summary: This gene product is a member of a family of proteins characterized by a specific cysteine-rich

C-terminal domain, which is involved in transcriptional regulation of viral genome expression.

Alternative translation initiation from an upstream non-AUG (GUG), and an in-frame,

downstream AUG codon, results in the production of two isoforms, p40 and p32, respectively, which have different subcellular localization; p32 is mainly found in the cytoplasm, whereas p40 is targeted to the nucleolus. Both isoforms have transcriptional regulatory activity that is attributable to the cysteine-rich C-terminal domain. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, Oct 2009]
